About Blog Works

Key Components

- A **Navbar** on all pages that has an active border status effect for the current page you are on and the navbar icon currently hovering.

- A **contact form** with a submit button on my homepage.

- **Blog cards** that contain Headings for date and title, text and image.

- **A footer** on all pages that links to my developer media accounts and has a scale effect when hovered.

Home About Exp Works

About me:

Hello again! Now that you've made it this far. I would like to tell you more about myself.

Late Teens

I Graduated high school 🎓 in 2016 and then began my journey studying physics ⚗️ at UQ in 2017.

During my studies I started working as a radio operator at Suncorp Stadium where I communicated information across radio channels.

Phone bottom

And then in 2019 I met the light of my life -

Early 20's

After a financially tough year 😫 I left University to persue a huge hobby of mine.
I began working with my partner as a cook 👨‍🍳 at Rashays.

After a few years of practice I became a kitchen manager 👨‍🍳 where I had a lot of fun but felt like I was missing something.

That is when in late 2021 amidst covid lock downs I decided to undertake Harvards CS50 👆 where I learnt the programming language ©. Which leads me to now.

Currently:

I am a coder academy student looking forward to making some smashing websites.

Experience:

Programming:

After undertaking a computer science course in Python at UQ and completing the Harvard CS50 online course I have strong programming experience with Python, Ginga and Flask. In addition to this I have experience working with C, HTML, CSS, SASS and SQLITE.

Volunteerwork:

For 2 years I worked in a retail space with a team of volunteers for the Australian Red Cross. It was with our strong values, teamwork, customer service and organisation skills that we raised ~100,000$.

In addition to my programming experience and volunteerwork I have been a line cook and kitchen manager for 2 years and an experienced radio operator for 3.

Review

- Simplify my containers or the design so that they can be more reusable across all web pages.

- Utilise css variables for more properties like font styling to reduce repetition.

- Create a navbar disappears when you scroll down and reappears when the user starts to scroll up to increase user experience and accessibility.

- Use the same margin across all pages.

- Take into consideration a theme changing button so that the website is even more accessible to colour blind demographics.

- Images were larger than expected.

Thank you.
